

## nFront Password Filter™ Multiple Policy Edition

### Password 123 is not an option

nFront Password Filter is designed to seamlessly protect your network by forcing sensible passwords. nFront Password Filter prevents weak passwords and gives you the ability to enforce strong passwords using a solution that is integrated at the Windows operating system level.

nFront Password Filter offers a very flexible configuration to enforce almost any password criteria imaginable. Furthermore, it includes a dictionary password check. The dictionary used by nFront Password Filter is a plain text file and 100% customizable. Now you can stay one step of hackers (or auditors) and load the dictionary files used by their password crackers. The days of periodically running password crackers and scanning for poorly chosen passwords are over when you implement nFront Password Filter.

### Multiple Policies to Protect High Risk Accounts

Has an external auditor ever cracked the password to an administrator's account? How about someone in the Finance department or one of the Executives? nFront Password Filter MPE gives you the flexibility to establish multiple password policies with different restrictions for different global and universal security groups. Now you can make sure wireless users, administrators and executives use sensible passwords that cannot be cracked by many of the common dictionary password crackers.

### How It Works

nFront Password Filter is a package that you load on all of your domain controllers. All password changes for domain user accounts must go through the password filter DLL. Once loaded, there is no way around the DLL.

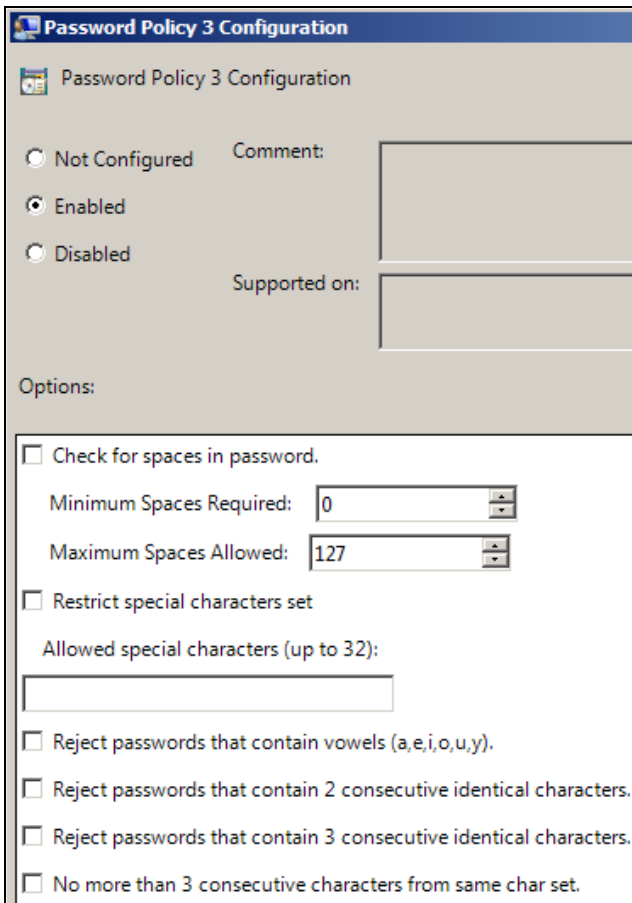

1. User submits password change.
2. LSA calls nFront Password Filter. nFront Password Filter consults password policy.
3. nFront Password Filter may check dictionary.
4. nFront Password Filter tells LSA if password is acceptable. User's password change is accepted or rejected.

nFront Password Filter Policy Settings

Optional client displays rules and optional strength meter

### Advantages

- Easy to deploy and configure.
- Controlled by a Group Policies.
- Multiple Policies. No more one size fits all password policy for everyone.
- No SPOF [Single Point of Failure]. No network API calls leave the local DC ensuring that you never skip password filtering due to an unavailable password policy server!
- Performance. If dictionary scanning is used, nFront Password Filter can scan over 3 million common passwords in less than one second.

### Features

- Very flexible configuration.
- Very fast filtering engine.
- Rules to ensure password compatibility with UNIX and AS/400.
- Works with Windows 2003, 2003R2, 2008 (32 and 64-bit) , 2008 R2 and Server 2012.
- Fully customizable dictionary supporting multiple languages.
- Optional multilanguage client which can inform users of password policy rules and provide exact reasons why a password change was rejected.
- Client works with Windows XP, Windows 7, Windows 8 and Windows 8.1.
- Separate web application available for an improved password change experience.
